

# Known issues for Premiere Pro (version 13.1)

---

## Issues with LUTs

Here is a list of known issues with LUTs in Premiere Pro:

- When fx is disabled, the embedded LUT of the RED file is removed, although it appears to be applied.
  - Error while importing a red file with embedded LUT to Adobe Media Encoder
- 

## Playback issues

- Playback fails or hangs for some imported clips when using Premiere Pro on Windows. To work around this issue, delete the media cache.
  - Some iPhone 8 HEVC files do not play back on Windows.
- 

## Stability issues

- Using trackpad to zoom in and out when using the Freeform view in the Projects panel can sometimes cause Premiere Pro to crash.
  - Premiere Pro can hang on quitting when warp stabilizer analysis is ongoing for nested sequence with transition header.
  - Applying a Lumetri effect on a RED clip can cause Premiere Pro to crash.
- 

## Other issues

- Program monitor direct manipulation does not work in Premiere Pro on macOS when using CTRL key as a modifier.
