Notes on database driver and Java support :

- The use of additional third-party JDBC drivers is supported. However, Adobe is not responsible for issues arising specifically from the use of those drivers or for supporting the third-party drivers themselves. For more information on ColdFusion support for JDBC drivers not shipped with the product, read the TechNote at www.adobe.com/cfusion/knowledgebase/index.cfm?id=tn_1853.
- All ColdFusion users can upgrade Java to the latest minor version for their ColdFusion servers. For example, ColdFusion users using jdk1.8.0_x can upgrade to the latest jdk1.8.0_x update. (At the time of writing, the current version is jdk1.8.0_66.) All future JDK1.8.0_x releases are supported.

DISCLAIMER: This document is intended to provide information about the possible platform combinations available at the time of its writing. Some platform combinations may not be supported by vendors of the various components of the platform (operating system vendor, web server vendor, application server vendor, JDK provider, and so on). Please refer to each vendor's system requirements and support policies to ensure the combination you plan to run is supported.
